

EUNJI HWANG

Statistics & CS Graduate · Data Analysis, SQL & Visualization

New Westminster, BC | 236-989-6106 | eunji1102@outlook.com | github.com/eunji1120 | linkedin.com/in/eun-ji-hwang-b93706201

TECHNICAL SKILLS

Data & Analytics: SQL (MySQL), Power BI, Excel, Data Visualization, Reporting & Dashboards, A/B Testing
Statistics & ML: Hypothesis Testing, Regression, Classification, Bayesian Modeling, Time-Series Forecasting
Programming & Tools: Python (pandas, NumPy), R (tidyverse, ggplot2), Java, JavaScript, Git, Jupyter, Linux
Languages: English (fluent), Mandarin Chinese (fluent), Korean, Spanish

PROJECTS

- Hot-Pot Restaurant Management System** | *React, Node.js, MySQL* | [repo](#) CPSC 304
- Built (team of 3) a full-stack inventory-and-sales platform spanning 6 restaurant branches on a normalized 20+ table MySQL schema designed from an ER diagram.
 - Built the React frontend (axios) that surfaces data-driven business insights — least-profitable dish per branch, highest-profit day — powered by SQL joins, nested subqueries, and aggregation (GROUP BY / HAVING).
- Commercial Banking Outreach Analysis** | *R* | [repo](#) STAT 201
- Applied hypothesis testing (difference in means/medians, bootstrapping, t-tests) to quantify how call duration drove outreach success among degree-holding customers.
 - Distilled p-values and confidence intervals into clear business takeaways and presented to an audience of 150.
- Campus Food Security App — HCI Usability Study** | *Python* | [repo](#) Data Analysis Lead
- Led the data analysis for a 10-participant usability study; cleaned messy free-text survey data in Python (pandas) and scored task-clarity across 6 key steps, surfacing the weakest step at 30% clarity.
 - Coded open-ended feedback into friction themes, yielding prioritized, actionable design recommendations.
- Bayesian Heavy-Tailed Modeling of Wildfire PM2.5 (BC)** | *R, Stan* | [repo](#) STAT 405 (solo)
- Single-handedly modeled 4 years of daily PM2.5 (~1,460 observations) from a BC air-quality station in Stan, showing a Student-*t* seasonal model captures extreme pollution tails the standard Normal model misses.
 - Ran full Bayesian inference with convergence diagnostics ($\hat{R}$, ESS, MCSE) and LOO-CV model comparison, and confirmed results with prior sensitivity analysis and a 50-replication synthetic-data calibration study.

EXPERIENCE

- Team Lead (Level 2)** May 2023 – May 2026
Haidilao Hot Pot *New Westminster, BC*
- Promoted to Level-2 Team Lead; oversaw service for 50+ customer groups per shift and trained and coordinated team members during peak hours.
 - Diagnosed recurring bottlenecks and redesigned service workflows, improving turnaround and consistency.
- Teaching Assistant** Dec 2019 – Aug 2020
Helen Studio
- Built rapport with 47 students and explained difficult technical concepts clearly, lifting grades by 15% and earning satisfaction ratings up to 95%.

EDUCATION

- University of British Columbia** Sept 2021 – June 2026
BSc, Statistics (Computer Science specialization) *Vancouver, BC*
- Relevant coursework:** Applied Machine Learning, Bayesian Statistics, Statistical Modelling, Statistical Inference, Databases, Data Science, Data Analysis, Data Management, Data Structures & Algorithms, Linear Algebra
